General Terms for Pricing Packages and Fee Calculation

Defining the conditions for selecting the Barion Smart Gateway Fix and Barion Smart Gateway IC++ pricing packages.

General Conditions

When creating a Shop, the merchant can choose between the Barion Smart Gateway Fix or IC++ pricing packages.

The Barion Smart Gateway Fix package is only valid if the following conditions are met simultaneously:

- The average monthly cart value when using the Barion Smart Gateway is at least HUF 10,000 / CZK 620 / EUR 25 / USD 25 / PLN 110 / RON 130 . If the shop operates in multiple currencies, the average monthly cart value is determined in the primary currency. In the case of multiple currencies, the value is calculated based on the last cross exchange rate (<https://www.barion.com/en/legal-information>) on the day before the date of the evaluation.
- The combined share of corporate and foreign consumer bank cards does not exceed 2% of total monthly turnover. A foreign bank card is defined as one issued in a country different from the shop's registered country.

Barion reviews these conditions monthly. If any condition is not met, Barion has the right to switch the pricing package to the corresponding turnover tier of the Barion Smart Gateway IC++ package no later than the 15th day of the following calendar month.

If a pricing package change occurs for this reason, the shop will no longer be eligible for the Barion Smart Gateway Fix package in the future, even if they later meet the required conditions.

Fee Calculation Basis

Unless stated otherwise, percentage-based fees are calculated based on the total transaction amount.

Monthly Average Turnover Calculation

The monthly average turnover includes the total amount of transactions made via bank card acceptance, Barion balance payments, and bank transfers.

If the shop operates in multiple currencies, the monthly average turnover is determined in the primary currency. The calculation is based on the last cross exchange rate (<https://www.barion.com/en/legal-information>) on the day before the date of the evaluation.

For a new shops:

In the absence of actual online bank card monthly turnover, the fees applicable for up to HUF 5 million in average monthly turnover under the Barion Smart Gateway Fix or Barion Smart Gateway IC++ packages will be charged. The turnover category will be reviewed for the first time after two full calendar months following the shop's approval by Barion, based on the average monthly turnover: the total turnover achieved by the shop in the previous two full calendar months, divided by 2.

For a Shop operating for at least 3 full calendar months:

The monthly average turnover is reviewed every month, based on the last three full calendar months. The calculation formula:

$$(\text{Total turnover in the last three full months}) / 3.$$

The first review for a new shop occurs in the month after completing three full calendar months, and then it continues on a monthly basis.

<i>Fee Change Due to Turnover Tier Exceedance</i>	<p>If the shop exceeds the turnover tier specified in the fee table even once, the higher fee tier will be applied starting from the 15th day of the following month.</p> <p>After this adjustment, the shop remains in the new turnover tier regardless of whether their monthly average turnover decreases later.</p>
---	---

Conditions for Choosing the Starter and Advanced Pricing Packages

<i>Displaying Accepted Payment Method Logos</i>	<p>Merchants must display the logos of accepted payment methods as specified by the Issuer. Detailed guidelines on placement are published on Barion's website.</p>
<i>Placing the Base Barion Pixel and Sharing Cart Content for Fraud Prevention</i>	<p>The Barion Pixel is a JavaScript code that tracks visitor activity on merchant websites. The merchant must install and configure it within their website's source code in compliance with GDPR regulations. The Base Barion Pixel allows Barion to analyze all payments to help protect merchants from fraud. Data collected with the Base Barion Pixel is not used for marketing purposes by Barion.</p>
<i>Placing the Full Barion Pixel</i>	<p>The merchant agrees to implement the Full Barion Pixel on their website according to the instructions published on Barion's website. Data collected with the Full Barion Pixel may be used by Barion for marketing purposes, but only with the user's GDPR-compliant consent.</p>
<i>Pricing Package Selection</i>	<p>If a merchant chooses the Advanced package but fails to meet its conditions—whether at the time of approval or at any point afterward—Barion reserves the right to downgrade the merchant to the Starter package.</p>
